

Description

Ramset™ Self Drilling Particleboard Screws are designed for attaching particleboard and soft timbers to particleboard or soft timbers. Ideal for furniture, cabinet making and office partitioning applications.

Specification

Material	Fine Grain High Carbon Steel
Corrosion Protection	Zinc Plating
Head Style	Countersunk Rib - Phillips
Point Styles	Needle
Thread Styles	Coarse
Fixing Method	Through Fixing
Setting Method	Rotation
Anchoring Method	Thread Forming
Screw Gauge	8
Thread Pitch	10
Screw Lengths	20mm, 25mm, 45mm
Substrates	Particleboard (Chipboard, MDF), Soft Timber

Features & Benefits

- Ramset™ Self Drilling Particleboard Screws are manufactured from fine grain high carbon steel and heat treated for strength.
- The countersunk rib head self-embeds below the surface of the particleboard or timber for a flush finish.
- Coarse thread for maximum grip and minimum stripout.

Installation

- Using a drill driver or screw gun set to approx 1000rpm, insert the point of a Philips Head screwdriver bit into the recess of the screw, place the screw point against the surface to be fastened, push sharply to create a starting point, and drive the screw into the material until the head is flush with the surface.
